Summary

The 3.3V General Purpose I/O library provides bidirectional I/O, isolated analog I/O, and a full complement of power cells along with corner and spacer cells to assemble a complete pad ring by abutment. An included rail splitter allows multiple power domains to be isolated in the same pad ring while maintaining continuous VDD/VSS for robust ESD protection.

- Programmable bidirectional GPIO
- Fault-tolerant programmable bidirectional GPIO
- Input-only buffer
- Isolated analog I/O
- Full complement of power, corner, and spacer cells

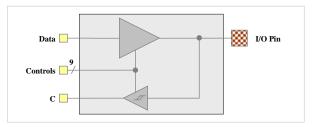

ESD Protection:

- JEDEC compliant
 - 2KV ESD Human Body Model (HBM)
 - o 200 V ESD Machine Model (MM)
 - 500 V ESD Charge Device Model (CDM)

Latch-up Immunity:

- JEDEC compliant
 - \circ ~ Tested to I-Test criteria of \pm 100mA @ 125°C ~

SRx_BI_SDS_33V_STB / FRx_BI_SDS_33V_STB

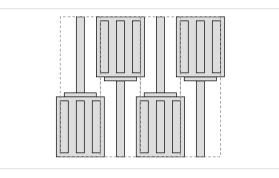

Bidirectional GPIO Driver Features

- Multi-Voltage (1.8V, 2.5V, 3.3V)
- LVCMOS / LVTTL input with selectable hysteresis
- Programmable drive strength (rated 2mA to 12mA)
- Selectable output slew rate
- Optimized for EMC with SSO factor of 8
- Open-drain output mode
- Programmable input options (pull-up/pull-down/repeater)
- Power-On Start (POS) capable Power sequencing independent design with Power-On Control
- Fault tolerant cell provides fail-safe operation

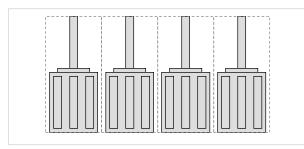

In full-drive mode, this driver can operate to frequencies in excess of 100MHz with 15pF external load and 125 MHz with 10pF load. Actual frequency limits are load and system dependent. A maximum of 200 MHz can be achieved under small capacitive loads.

Cell Sizes & Form Factor

Staggered (pad-limited) – 20 μ m x 180 μ m

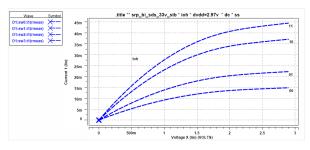

Inline (core-limited) - 44µm x 92µm

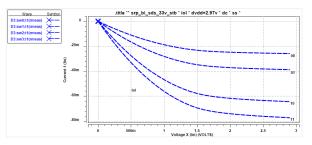

Output Drive Strength

I_{OH} (DVDD = 2.97V, SS)
